

Additional Products

In addition to the outboard support spindle models on the previous page, G II Solutions continues to support legacy models. Although these models are not actively promoted, G II Solutions maintains inventory to support these products. In some instances these models may be a better fit than current newer models. All outboard support spindle models require a “cradle” to properly support the unit. Each application invariably has different space constraints and diamond roll diameter requirements, so there are no “standard” cradles. Shown on this page are a few examples of cradles that have been used in previous applications.

Legacy Models

DTS 1400

DTS 2400

DTS 2500

Cradle Examples

DTS 3404/4404 Low Profile Cradle

DTS 1400 in Compact Cradle

DTS 2400 Cradle

DTS 3404 in Heavy Duty Cradle for Large Diameter Diamond Roll
